EDUCATION

Stanford University

M.S. Computer Science (ML Focus)

Stanford, CA

Sep. 2025 – June 2027

University of California, Davis

B.S. Computer Science & Engineering: GPA 3.98/4.00

Davis, CA

Sep. 2022 – June 2025

EXPERIENCE

MLE/Applied Research Intern

Pinterest

June 2026 – Sep. 2026

San Francisco, CA

- Invented novel red-teaming characterization methods for downstream VLM post-training to correct failure modes
- Achieved substantial decreases in VLM content policy violations with minimal regression over critical Pinterest end consumer use cases
- Built upon prior work in slice detection models, probabilistic embedding clustering, and VLM red-teaming

SDE Intern

Amazon

June 2025 – Sep. 2025

Bellevue, WA

- Reduced team-members' on-call load using RAG and chain-of-thought reasoning for LLM ticket automation
- Integrated ticket automation w/ Bedrock and TypeScript Lambdas hooked into Kendra with REST entry-point
- Designed accessible React chat-bot UI backed by RESTful microservice, iterating with customer feedback
- Accelerated team's development process, writing MCP servers in custom Lambda transport to aggregate internal Wiki

Research Intern

University of California, Davis (Dr. Ian Davidson)

Sep. 2023 – June 2025

Davis, CA

- **Paper acceptance to TMLR 2025 (CXAD: Algorithms, Complexity Results and Experiments)**
- Mitigating statistical bias across protected status values in popular datasets to reduce systemic harm
- Invented and formalized novel unsupervised systems that explain clusters using integer linear programming with convolutional variational auto-encoders, validated with experiments in PyTorch

SDE Intern

Amazon Web Services

June 2024 – Sep. 2024

Santa Clara, CA

- Added network switch deployment metrics to main datacenter logging system using StepFunction and revamped React dashboard
- Leveraged OpenSearch to implement scalable NoSQL ingestion schemas for all of Amazon's datacenter switch configuration data
- Reduced technical debt of Web SaaS dashboard by proactively migrating entire JavaScript UI codebase to TypeScript

Research Intern

Massachusetts Institute of Technology (MIT) (Dr. Arvind Satyanarayan)

May 2021 – Aug. 2021

Cambridge, MA

- Implemented Qualtrics API in Python to automate ML training data generation from research surveys
- Built Python tooling for assembling corpus of accessibility benchmark data to help visually disadvantaged people interpret statistical charts
- Developed workaround solutions with Bash for running Docker NLP models in batch on outdated HPC Linux infrastructure

OPEN SOURCE

Academic Literature Manager [source] | Rocicorp Zero

2026

- Literature tracking for researchers, supporting real-time annotation support and automatic citation graph tracking
- I applied agentic one-person project management: managed swarms of agents to build, review and test features

TECHNICAL SKILLS

Academic Strengths: Unsupervised Learning, Clustering, ML/Algorithmic Fairness, Deep Learning

Frameworks: PyTorch, Keras, NumPy, React, AWS

Currently Learning: Statistical Learning Theory, Modern Algebra, CUDA, Haskell
